Education

Sichuan University (SCU) 2017 – Present

Master of Engineering Major in Software Engineering
Supervised under Prof. Yi-Fei Pu
GPA: 3.20 / 4.0

Chongqing University of Posts and Telecommunications(CQUPT) 2013 – 2017

Bachelor of Engineering, received in 6/2017
Major in Software Engineering
GPA: 3.28 / 4.0

Publications

- **Extreme Low Resolution Activity Recognition with Spatial-Temporal Attention Transfer**, **Yucai Bai**, Qiang Dai, Long Chen*, recently submitted to the AAAI2020.
- **Monocular Outdoor Semantic Mapping with a Multi-task Network**, **Yucai Bai**, Lei Fan, Ziyu Pan, Long Chen* - IEEE/RSJ International Conference on Intelligent Robots and Systems (IROS), 2019
- **A Fractional Total Variational CNN Approach for SAR Image Despeckling**, **YC Bai**, S Zhang, M Chen, YF Pu*, JL Zhou - International Conference on Intelligent Computing(ICIC), 2018
- **A Fractional-Order Variational Residual CNN for Low Dose CT Image Denoising** M Chen, YF Pu*, **YC Bai** - International Conference on Intelligent Computing(ICIC), 2019

Projects

Non-compliance Action Detection of Court Scene in Surveillance Videos March 2019 - Present

As the team leader, I designed and led the entire project, including **a detection algorithm of the count non-compliance actions in real-time** and **the production of corresponding datasets**. Firstly, we use the **object detection** algorithm to detect people and crop the corresponding area. Then we use the **image-based algorithm** to process the easy-to-classify categories and **3D convolution network** for more complex actions.
We won **2nd** in the action recognition track of **Teda·Huabo cup innovation and entrepreneurship challenge**

Extreme Low Resolution Action Recognition May 2019 – Present

In order to solve the problem that the target in the back corner of the court is too small, we proposed a new method to recognize **extreme low-resolution action**. We make full use of the high-resolution information of separate spatial and temporal features to promote low resolution recognition by acquiring better attention. The results achieve **state-of-the-art performance** on 12*16 HMDB51.
The corresponding paper is submitted to AAAI 2020.

Monocular Outdoor Semantic Mapping with a Multi-task Network July 2018 - March 2019

We proposed a novel multi-task network is designed for semantic prediction and monocular depth estimation. To overcome the inconsistency depth prediction for reconstruction, post-processing steps with the superpixelization and the effective 3D representation approach are obtained to give the final semantic map.
The corresponding paper is accepted by IROS 2019.

HONORS

- Second Prize Merit-based Scholarship, SCU 7/2019
- The Second Prize, 6th TedaHuabo Cup, Action Recognition Track 6/2019
- Excellent postgraduate student, SCU 9/2018
- Excellent Graduation Thesis, CQUPT 6/2017
- Third Prize Merit-based Scholarship, CQUPT 9/2015
